*(JDV is VESSEL's Exclusive USA Distributor)*

VESSEL Company, a manufacturer of static control products located in Osaka Japan, announces the release of their new model G-5 Air-Powered Ionizing Gun, a next-generation static elimination solution designed to deliver maximum performance, improve operator mobility, and simplified operation. The G-5 is well suited for use in plastics, electronics, packaging, clean-working environments, and general manufacturing.

Conventional ionizing guns typically require both an electrical power connection and a compressed air supply. Many models rely on external high-voltage power supply boxes mounted near the work area, which can limit operator mobility, complicate cable and hose management, and increase maintenance requirements. The VESSEL G-5 eliminates these challenges by operating exclusively on compressed air, removing the need for electrical connections, external power supplies, or batteries. Using an innovative internal design, compressed air drives a built-in air motor that generates electricity in a manner like a generator. A dedicated control circuit ensures consistent ion production, even when air pressure fluctuates.

Designed for true plug-and-play operation, the G-5 easily connects to an air supply using an 8mm air inlet located at the base of the handle. With a simple press of the multi-finger trigger, the ion gun delivers a powerful blow-off force up to 101.5psi air pressure, achieves a static decay time of less than one second, and maintains an excellent ion balance.

Other features include a compact and lightweight design weighing only 0.8lbs, a convenient integrated LED light to illuminate the work area, an easy-to-see operating status indicator on the rear of the housing, a protective rubber nozzle guard, and a durable housing with an integrated hanger that supports multiple suspension and storage options.

With its innovative power-cable-free design, the VESSEL G-5 Air-Powered Ionizing Gun sets a new benchmark for static control tools, offering improve mobility, simplified setup, and excellent performance.

For more information about the G-5 Air-Powered Ionizing Gun and other VESSEL static eliminating equipment, please visit [www.vesseltools.com](http://www.vesseltools.com) or inquiry by phone at 201-796-1720.
